

CMMC Day

The Industry Reconvenes for a Face-to-Face Event

Cybersecurity Maturity Model Certification (CMMC) is a framework of supply chain security requirement that will apply to over 300,000 defense industry base (DIB) subcontractors, and their related commercial product developers, third-party auditors, integrators, and testing laboratories. At CMMC Day we'll investigate this wide-ranging effort to extend foundational standards to ensure cybersecurity for DoD stakeholders and across the federal workspace. CMMC Day is held in conjunction with the ninth International Cryptographic Module Conference, one of the largest annual gatherings for developers of FIPS- or CC-certified ICT components, products, and solutions.
