

Perry Johnson Registrars,

I want to take a moment and send a thank you to all at Perry Johnson Registrars for your expertise and professionalism in adapting to the changes all industries have been facing with the unforeseen implementation of COVID-19 in world-wide industries. As we got closer to our Stage II audit, key important decisions for our audit were changing by the day, in what seemed like every hour. Michael (Jimmy) Dereta was our auditor, and after altering the audit plan to have our Stage II on-site and off-site (Virtual), we were excited and eager to pioneer this new development and auditing process.

On Sunbelt Machine Works behalf, I would like to commend Perry Johnson Registrars on the Virtual Audit that took place, and how smoothly it was conducted. The platforms we used allowed cell phones to merge into the conference along with desktops, and the ability to stay online with the auditor for 8 or 10 hours a day was so smooth and streamline. I was able to walk out into the production areas and let Jimmy interview people, see critical areas of the shop, verify calibration stickers, etc. All while still being accessible to all key management located at their computers in their offices across our 3 buildings. Information and documentation was practically transferred immediately, or seen through a secured network access with screen share. Sunbelt Machine Works has held a Quality Certification for 24 consecutive years now, and this audit was by far the smoothest and well rounded audit I have ever been a part of. Being able to have everybody on standby in a web conference and available when called upon made the efficiency of our audit streamline and extremely successful on both parties behalf.

I cannot recommend PJR enough for their professionalism, and willingness to help and adapt the business and auditing plan while many other business's in every industry are continued to be faced with extreme strain and hardships.

Thank you very much PJR. We are looking forward to the next time!

Best,

Chris Scantlin
